

Checkers Data Model

Joe Wong
jlwxz8

Layout:

Since the Dark Player goes first we always orient the map with 0,0 on the dark player's side.

Legality of moves for dark player:

- A move is legal if the row number is exactly +1 from the current piece's row(CR) AND +/- 1 from the current piece's column (CC).
- No row values of less than 0 or greater than NUM_ROWS - 1 can be legal
- No col values of less than 0 or greater than NUM_COLS - 1 can be legal

0,0	0,1	0,2	0,3	0,4	0,5	0,6	0,7
1,0	1,1	1,2	1,3	1,4	1,5	1,6	1,7
2,0	2,1	2,2	2,3	2,4	2,5	2,6	2,7
3,0	3,1	3,2	3,3	3,4	3,5	3,6	3,7
4,0	4,1	4,2	4,3	4,4	4,5	4,6	4,7
5,0	5,1	5,2	5,3	5,4	5,5	5,6	5,7
6,0	6,1	6,2	6,3	6,4	6,5	6,6	6,7
7,0	7,1	7,2	7,3	7,4	7,5	7,6	7,7

Light Player

Legality of Jumps for dark player:

- A light color piece must exist within the legal movement of current piece
- Row of jump space is CR + 2
- Col of jump space is CC + 2*(Captured piece's col - CC)
- Jump space must be empty

Legality of moves for light player:

- A move is legal if the row number is exactly -1 from the current piece's row(CR) AND +/- 1 from the current piece's column (CC).
- No row values of less than 0 or greater than NUM_ROWS - 1 can be legal
- No col values of less than 0 or greater than NUM_COLS - 1 can be legal

Legality of Jumps for light player:

- A dark color piece must exist within the legal movement of current piece
- Row of jump space is CR - 2
- Col of jump space is CC + 2*(Captured piece's col - CC)
- Jump space must be empty

Kings:

- A dark piece becomes a king if it reaches NUM_ROWS - 1.
- A light piece becomes a king if it reaches row 0.
- A king assumes all legal moves for a regular dark piece.
- A king assumes all legal moves for a regular light piece.

General Game Play:

- Dark player must always go first
- If a jump exists, current player must make a jump and any subsequent jumps
- A player loses when there are no legal moves or jumps
- A draw occurs when drawCounter is reduced to 0 from 50
 - drawCounter reduces by 1 for each turn in which no KING or JUMP occurs and is reset on King or JUMP event

Data Model FIELDS list:

- currentPlayer:Player
- darkPlayer:Player
- lightPlayer:Player
- jumpList[]:Jump
- moveList[]:Move
- darkChips[]: Chip
- lightChips[]: Chip
- boardState[][] - holds Chip(king, color) where color can be light, dark
- drawCounter:int
- currentPosition:Position(int, int)
- turnCounter:int

Data Model METHODS list:

- setCurrentPlayer(Player)
- getCurrentPlayer():Player
- setDarkPlayer(Player)
- setLightPlayer(Player)
- makeJumpList()
- getJumpList():Jump[]
- isJumpLegal():boolean
- makeMoveList()
- getMoveList():Move[]
- isMoveLegal():boolean
- setBoardState(Position, Chip)
- getBoardState(): Chip[][]
- setDrawCounter(int)
- getDrawCounter():int
- setCurrentPosition(Position)
- getCurrentPosition():Position
- setTurnCounter(int)
- getTurnCounter():int
